Our services

More than twenty years we have activities in whole country in the fields of civil engineering, building constructions, designing, production of concrete prefabricates. We had a part in a lot of projects as on motorway (Sarajevo - Zenica, Sarajevo - Tarčin), Art gallery in Sarajevo, Islamic center in Breza, smaller concrete and steel bridges, river revetments, shopping centers, gas station.

The strategy of Termo-Beton is to achieve sustainable and profitable growth through:

- investing in employees and opportunities in the market;
- building long-term and reliable partnerships;
- expanding the market for our products and services;
- performing high quality construction works.

Quality Policy of Termo-Beton is that all of our activities take place in accordance with the Quality Management System that we carry out in accordance with BAS EN ISO 9001: 2015.

Quality is an integral part of our business principles. Our principles lead us to be recognized as a company that offers products and services that are of high quality and in accordance with customer needs. We are dedicated to never compromising the safety, compatibility and quality of our products and services.

Our products

Production is carried out at two locations in Breza, in two production halls with concrete plants by. More than 100 products are manufactured, such as concrete and RC pipes, drains, curbs, concrete slabs, RC gabions, RC purifiers of oily liquids, revision shafts according to the system PERFECT, prefabricated RC concrete halls, 12-24 m width.

PERFECT manhole

PERFECT manhole is a new technology that enables the production of concrete manhole bases with a single pouring. With the production of PERFECT manholes, Termo-beton Ltd. has offered a unique product in the market of B & H, but also wider.

The standard PERFECT manhole for precipitation and waste water consists of a base, joints and a chamber benching, a cylindrical body of manhole and cone finishing that are predominantly one element.

The entire process is in accordance with EN 1917 - Concrete manholes and inspection chambers.

The number, diameter and position i.e. the angle of the required pipe connection as well as its height are individually determined without any deviations.
